Handling	Restricted - Law Enforcement Sensitive

Basis of this report. Every statement is templated over a stored forensic finding; the generator has no free-text capability and cannot introduce a fact the analysis did not compute. Where an input was unavailable the report says so explicitly rather than inferring. Section 18, Report Provenance & Integrity, lists the SHA-256 digest of every source artifact, so this document can be tied back to the exact evidence state it was produced from.

Distribution. This report contains material relating to an active investigation. Onward disclosure is restricted to persons authorised by the case officer.

1. Executive Summary

- Case CASE_2CF24DBA5F contains 4 evidence items, each acquired under SHA-256 chain-of-custody verification.
- The weighted correlation engine found 6 related evidence pairs out of 6 analysed [correlation_analysis.json].
- Observed attack progression: financial_transaction -> post_attack -> initial_contact -> social_engineering -> credential_theft [timeline_analysis.json].

2. Scope & Methodology

- **objective:** Acquire, verify, correlate and reconstruct the digital evidence for this case, and derive investigative leads (suspect anchors, campaigns, cross-case links) strictly from stored, hash-verified artifacts.
- **evidence scope:** 4 evidence items acquired through the CIIS intake pipeline under SHA-256 chain-of-custody control.
- **methodology:**
 - Phase 1 - Acquisition & OCR: PaddleOCR PP-OCRv5 text extraction with per-item confidence scoring; SHA-256 fingerprint recorded at intake and re-verified at read.
 - Phase 1 - Forensics: metadata/EXIF consistency, forgery signals, logo detection and evidence-confidence scoring stored per item under storage/forensics/.
 - Phase 2 - Correlation: weighted entity-overlap engine scoring every evidence pair; results in correlation_analysis.json.
 - Phase 2 - Cross-case: shared-entity matching against every other analysed case (cross_case_correlation.json).
 - Phase 2 - Campaigns / Suspects / Timeline: clustering, anchor derivation and event reconstruction over the correlated evidence set.
 - Threat intelligence: URL/domain indicators scored by the configured provider (static indicator file, or the trained phishing classifier when CIIS_ML_THREAT_INTEL=1); per-indicator results in 'Model Prediction Results'.
 - Reporting: this document is assembled exclusively from the stored outputs above; it contains no free-text generation.
- **reproducibility:** Re-running the analysis against the same stored evidence reproduces every figure herein; artifacts are versioned and never overwritten.

- 4/4 evidence items passed SHA-256 chain-of-custody verification.
- The evidence set is internally connected (6 weighted relationships), consistent with related activity rather than isolated incidents.
- Observed stage order deviates from the canonical scam sequence; evidence acquisition order should be reviewed.

17. Statutory Basis

The findings engage 1 provision of the Electronic Transactions Act, 2063 (2008): s.45. Each is listed with the finding that engaged it and the evidence behind that finding.

Statute: Electronic Transactions Act, 2063 (2008) | **Jurisdiction:** Nepal

Cited from the English text of the Act. The Nepali text is authoritative where the two differ; verify any provision against the Nepali gazette copy in samples/legal_corpus/ before relying on it in a filing. (The Nepali title is given in the Markdown and JSON versions of this report; this PDF uses a Latin-only font set.)

Section 45 – Unauthorized Access in Computer Materials

Section 45, Electronic Transactions Act, 2063 (2008)

Conduct. Accessing any programme, information or data of a computer without the authorisation of its owner, or beyond the scope of an authorisation held.

Penalty. fine not exceeding two hundred thousand Rupees or imprisonment not exceeding three years or both

Why this is engaged. credential material appears in 1 evidence item (login), indicating access to an account was sought or obtained.

Evidence. EVID_00003

This is an automated mapping from technical findings to statutory provisions, provided to assist the investigating officer. It is not legal advice and not a charging decision. A provision is listed because the evidence contains the features described, not because an offence has been proved: intent, authorisation and identity are matters for investigation. Provisions of the Act not listed here were not assessed.

18. Recommendations

- Go through the 2 key moments - when money moved and codes were shared - with the victim, and record what they lost.
- Low urgency - handle after the others (rated 30 out of 100).

21. Statement of Limitations

- This report is produced by automated analysis of the material submitted to the case. It does not constitute an opinion on guilt, and no conclusion here should be read as attributing an offence to a named person.
- Correlation confidence expresses how strongly two items of evidence share identifying features. It is a measure of association, not of causation, and not of identity.
- Suspect scores rank identity anchors observed in the evidence by how strongly the material connects them to the case. An anchor is not a suspect in law until corroborated by investigation.
- Timestamps resolved from the content of an exhibit carry the reliability of that content. Where no timestamp could be recovered, the acquisition time is used and is labelled as such.
- The analysis reflects the evidence held at the date of issue. Material submitted later may change any finding in this report.
