Confidence & Caveats

Timestamps in this report are resolved with varying confidence. Readers should weigh conclusions accordingly:

- **high** — an explicit date and time were found in the evidence content itself (most forensically reliable).
- **medium** — either a chat-style inline timestamp or a time-only value combined with the upload date as a best guess; the date portion may be inexact.
- **low** — no usable timestamp was found in the content; the system fell back to the file's processing/upload time, which may not reflect when the underlying event occurred.
- **none** — no timestamp could be resolved at all; this item is listed at the end of the timeline, unordered relative to other unresolved items.

4 of 7 evidence item(s) have low or unresolved timestamp confidence and should not be treated as precisely dated without further corroboration.
