Every statement in this report references stored forensic findings; no content is generated outside computed results. Section "Report Provenance & Integrity" lists the SHA-256 digests of the source artifacts.

Executive Summary

- Case CASE_4106C94201 contains 1 evidence item(s), each acquired under SHA-256 chain-of-custody verification.
- The weighted correlation engine found 0 related evidence pair(s) out of 0 analysed [correlation_analysis.json].

Scope & Methodology

- **objective:** Acquire, verify, correlate and reconstruct the digital evidence for this case, and derive investigative leads (suspect anchors, campaigns, cross-case links) strictly from stored, hash-verified artifacts.
- **evidence scope:** 1 evidence item(s) acquired through the CIIS intake pipeline under SHA-256 chain-of-custody control.
- **methodology:**
 - Phase 1 - Acquisition & OCR: PaddleOCR PP-OCRv5 text extraction with per-item confidence scoring; SHA-256 fingerprint recorded at intake and re-verified at read.
 - Phase 1 - Forensics: metadata/EXIF consistency, forgery signals, logo detection and evidence-confidence scoring stored per item under storage/forensics/.
 - Phase 2 - Correlation: weighted entity-overlap engine scoring every evidence pair; results in correlation_analysis.json.
 - Phase 2 - Cross-case: shared-entity matching against every other analysed case (cross_case_correlation.json).
 - Phase 2 - Campaigns / Suspects / Timeline: clustering, anchor derivation and event reconstruction over the correlated evidence set.
 - Threat intelligence: URL/domain indicators scored by the configured provider (static indicator file, or the trained phishing classifier when CIIS_ML_THREAT_INTEL=1); per-indicator results in 'Model Prediction Results'.
 - Reporting: this document is assembled exclusively from the stored outputs above; it contains no free-text generation.
- **reproducibility:** Re-running the analysis against the same stored evidence reproduces every figure herein; artifacts are versioned and never overwritten.
